

## **SYSTEM AND METHOD FOR SHARING PLAYLISTS**

### **ABSTRACT**

A system for sharing playlists utilizes a network, such as the Internet. A player device other than a general purpose computer, such as a dedicated media player or a remote control for a dedicated media player, is in communication with the server over the network. The player device is configured to receive a playlist, queue the playlist, display the playlist, and play a selection from the playlist. A user profile may be used to identify playlists that are likely to contain selections of interest to the user.
